

## Partner History

Euro Mechanical & Electrical Contractors was formed in 1976 and became a 100% National company in 1983, wholly owned by Rashid and Hamid Al Hurr Al Suwaidi.

A British management team is responsible for the day to day running of the company with the objective of providing a professional installation, maintenance and supply service to the various UAE petrochemical industries, ministries and international contractors.

EMIS is the trading name of Electrical Mechanical Instrument Services (UK) Limited, a service company whose core business is described as: Calibration, Repair and Management of Test and Process Instrumentation.

The company was formed in 1992 as the result of a management buyout by several of the current managers from the original parent company. The calibration centre is based in Glasgow with offices in Livingston, Aberdeen, Middlesbrough and Oxford, and a joint venture company in Qatar. The laboratory holds accreditation from UKAS (United Kingdom Accreditation Service), BS EN ISO 9001:2000 and is also recognised as an Investor in People.

## Overview:

This flyer provides information on the partnership formed by EMEC and EMIS to cater for the instrumentation requirements of petrochemical companies in the United Arab Emirates.

The project started when the respective need for an instrumentation service was identified by several clients within the UAE. Both companies collaborated to offer the best service fit.

This is a 'cradle to grave' service being provided with benefits at each stage for the client.

### Overview of Capability

### EMIS (AD)

**A new company in the  
United Arab Emirates,  
offering calibration, repair  
and management services  
for instrumentation**

# The Calibration and Management Specialists

*EMIS(AD) provide both onshore and offshore calibration of test equipment as well as stock and database management.*

## Customer benefits include:

- Provision of technical assistance, ensuring 'state of the art' equipment utilised
- Calibration and repair carried out locally
- Quality Management and Health & Safety requirements met in full
- Full inventory management
- Interaction with other UK companies as required
- Freedom to focus on core activities

## The Model

EMIS offer extensive calibration capabilities to petrochemical operators and contractors in the UK, and have the vision to emulate this service in other oil producing areas. This has led to a successful joint venture company in Qatar (Qcal) and now in Abu Dhabi.

EMEC have also seen the need to provide a value added service to their existing client base and have been looking for a partner for some time.

A JV company called Euro Mechanical Instrument Services has been formed and will be known as EMIS (AD), to work with instrumentation throughout the Gulf region.

## The Capability

EMIS (AD) is sited in Abu Dhabi to offer calibration and repair services for test and process equipment users. All company activities will be controlled by BS EN ISO 9001:2000.

The Laboratory has the capability to provide electrical, pressure, temperature & torque calibration and repair facilities with traceability to UK national standards. This service is also fully portable and can be transported throughout the Gulf.

The technical capability is as follows:

- Electrical: dc & lf
- Pressure: up to 20,000 psi
- Temperature: -20 to +650°C.
- Torque: 2 to 400 Nm

## Additional Services

The company also offers a repair facility in support of the calibration services. This includes capabilities for electrical, pressure, temperature, torque testing equipment as well as process control instrumentation.

A further development encompasses instrumentation and equipment management, and the subsequent interaction with the OEM (original equipment manufacturer) and EMIS (AD) is structured to deliver this service for all clients. This will be facilitated through the partner company in the UK if no service facility exists in the Gulf.

EMIS (AD) also intend to hire testing equipment on a bespoke basis.

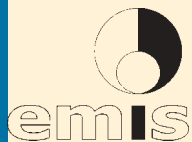

## The Resources

EMEC and EMIS have considerable experience throughout the industry and plan to utilise this to the benefit of the client.

The principal calibration engineer is a fully qualified BSc and has many years experience in the calibration and repair of instrumentation and test equipment, together with ISO 9001:2000.

He comes with a considerable training pedigree from companies such as Yokogawa (DCS Systems), Druck (Pressure Calibrators), Budenberg (Calibration) and Oldham (Gas Detection).

He is ably supported by an engineering team from EMEC locally, and by EMIS from the UK.
